

HUB — QUICK REFERENCE

HOW TO

Power On	Hold the PWR button for 3 second.
Power Off	Hold the PWR button for 3 seconds until "Power Off" appears on the screen.
Refresh the Screen	Press the PWR button once (a quick press, not a hold).

WHAT'S ON THE SCREEN

Battery %	Top-right corner.
Current Play	Shows the play name and details, or "Waiting for play..." if none has been called yet.
Phone Status	"Searching..." if no phone is connected. Shows a connection count once a phone is linked, plus "LIVE" while a game is active.
Bottom Status Line	Reports LoRa/transmit health — normally "TX OK," but will show "LoRa OFFLINE" or "TX FAIL" if something's wrong.

TROUBLESHOOTING

Phone won't connect	Confirm the screen doesn't say "Searching..." — if it does, check Bluetooth is on and the app is open on the phone.
Plays not reaching watches	Check the bottom status line for "LoRa OFFLINE" or "TX FAIL." If present, power the hub off and back on.
Screen looks frozen or stale	Press the PRG button once to refresh. If that doesn't help, power the hub off and back on.
